GitHub: github.com/Steven9981
Research Interests: Recommender System

EDUCATION

The University of Hong Kong (HKU) Ph.D. in Computer Science (HKU-SUSTech Joint PhD Program)	Hong Kong SAR 2020–2024 (Expected)
Southern University of Science and Technology (SUSTech) B.Eng. in Computer Science and Technology, GPA: 3.73/4.00	Shenzhen, China 2016–2020

INTERNSHIP

TikTok, ByteDance Recommendation Algorithm Intern	Shanghai, China Nov. 2022 - Mar., 2023
<ul style="list-style-type: none">– Leverage different recommendation strategies to increase publish rate of TikTok creators.<ul style="list-style-type: none">* Imitation Effect: Train a model using daily user-publish-video data to learn which kinds of videos that a user can create. Promote author publications by recommending them more they-can-create videos.* Traffic Incentives: Using uplift models to find users that are insensitive to unpopular (low video views) videos. Recommend more unpopular videos to them to promote author publishing and prevent user losing.* Comment Incentives: Investigate the correlation between #comments authors received and #publications of them. Increase the recommendation of low-comment videos to encourage authors publishing.	
TCL Corporate Research(HK) Research Intern	Hong Kong SAR Jun. - Aug., 2021
<ul style="list-style-type: none">– Propose an automatic effective meta-path searching framework for existing meta-path-based recommenders.– Propose a GNN-based method for recommendation by using meta-paths.	
Huawei Technologies Site Reliability Engineer Intern	Dongguan, China Jul. - Aug., 2019
<ul style="list-style-type: none">– Mainly engage in monitoring system development. Implement an anomaly alert and email notification system.– Complete 17 instructing documents, 3 demo (database migration tool, monitoring interface customization, key data query and alarm service) and 5 improvement suggestions.	

RESEARCH PROJECTS *(I AM THE FIRST AUTHOR OF ALL BELOW PROJECTS)*

- **Leverage Local and Global Popularity for recommendation** (Submitted to SIGIR'23)
 - Analyze the limitations of existing popularity-aware methods that consider item popularity from a global perspective and propose local popularity to tackle these limitations.
 - Propose the LGP framework based on casual graphs to jointly utilize local and global popularity for recommendation, which is general and can adapt to different recommendation models and use cases.
- **Multi-domain Recommendation with Domain Disentangling and Alignment** (Submitted to KDD'23)
 - Propose an embedding disentangling architecture for multi-domain recommendation, which explicitly disentangles inter-domain and intra-domain knowledge at the embedding level.
 - Formulate a random walk-based domain alignment strategy to identify similar users/items from different domains, which helps to share knowledge and avoid over-fitting.
- **Automatic Meta-Path Discovery for Effective Graph-Based Recommendation** (Accepted by CIKM'22)

- Propose a general reinforcement learning-based meta-path selection framework RMS, which is the first framework that can be plugged into any meta-path-based recommendation models.
- Develop a new meta-path-based recommendation method RMS-HRec and design training strategies to fully explore the potential of meta-paths for recommendation tasks.
- **Towards Efficient MaxBRNN Computation for Streaming Updates** (Accepted by ICDE’21)
 - Propose a novel problem called streaming MaxBRNN in spatial database area, which finds the optimal region to deploy a new service point when both the service points and client points are under continuous updates.
 - Devise an efficient slot partitioning-based algorithm (SlotP), which divides the space into equal-sized slots and processes each slot independently. SlotP is 2-3 orders of magnitude faster than SoTA baselines.
- **CheetahVIS: A Visual Analytical System for Large Urban Bus Data.** (Accepted by VLDB’20)
 - Built a visual analytical system CheetahVIS for efficient massive urban bus data analysis, which builds upon Spark and provides a visual analytical platform for the stakeholders (e.g., city planner, data analysts).

SCHOLARSHIPS AND AWARDS

- | | |
|--|-----------|
| • Postgraduate Scholarship | 2020–2024 |
| • Outstanding Graduate in Department of Computer Science and Engineering | 2020 |
| • Outstanding Graduate in Shuli College | 2020 |
| • Outstanding UG Teaching Assistant | 2019 |
| • Outstanding Student Scholarship | 2017–2019 |
| • Outstanding Freshmen Scholarship | 2016 |

TEACHING

- | | |
|--|-----------------------------------|
| • Teaching Assistant at The University of Hong Kong
<i>The Age of Big Data (CCST9047)</i> | Spring 2021 |
| • Teaching Assistant at Southern University of Science and technology
<i>Operating System (CS302)</i>
<i>Object Oriented Analysis and Design (CS309)</i>
<i>Data Structure and Algorithm Analysis (B) (CS203B)</i> | Spring 2020, Fall 2019, Fall 2018 |

SKILLS

- **Programming:** Python, Java, C++, SQL
- **Tools:** Pytorch, Numpy, Jupyter

LANGUAGES

- **Mandarin:** Native, **Cantonese:** Proficient
- **English:** Fluent
